

SOLO GLUE RITER™

Thank you for purchasing our new *SOLO GLUE RITER*. Use only water-based adhesives in this applicator! For best results, use Gluefast's **MATHESIVE 101**, an acid free adhesive great for gluing paper-to-paper items. **MATHESIVE 202** can also glue paper to styrene.

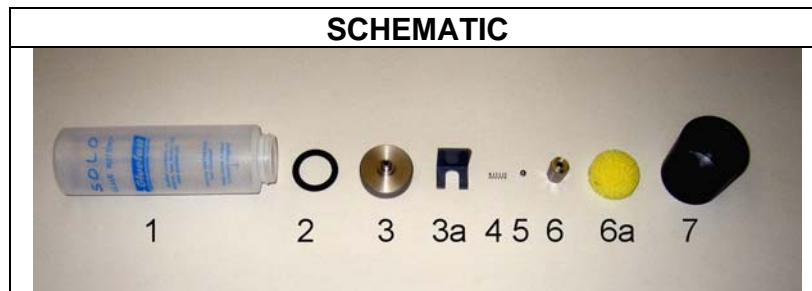

INSTRUCTIONS FOR USE

1. If your *SOLO GLUE RITER* came with adhesive, remove the cap from the bottle with adhesive (part #1 in the photo below) and screw on the nozzle & cap assembly (parts 2-6).
2. Place the tip of the nozzle on a flat surface, press down firmly and gently squeeze the bottle to begin glue flow.
3. Greater pressure will produce more adhesive flow.
4. Keep the flat part of the nozzle flat on the item to be glued to produce a flat ½" wide strip of adhesive.
5. For best results moisten sponge and place inside the stand. Place the *SOLO GLUE RITER* in the stand, with the nozzle facing downward. The nozzle contacts the damp sponge, preventing the adhesive from drying on the outer part of the nozzle.
6. The *SOLO GLUE RITER* is available with a ½" or 1/8" glue nozzle.

MAINTENANCE

If the nozzle clogs, unscrew the nozzle, taking care not to lose the spring and ball. Clean with soap & water.
