DUOMATE

Automatic Dispenser for GLUEFAST DUOS

(Pressure sensitive adhesive on a silicone release liner)

- The all new DUOMATE automatically feeds, measures, and cuts lengths of GLUEFAST DUOS. The unit can feed the standard DUO spots of glue or a continuous line of glue.
- Extremely Accurate - Lengths are set in .05" increments (1 mm when set for metric calibration), from 1" to 99".
- Convenient - Cut length of DUOS is held ready to be taken by the operator. As soon as the DUOS cut length is removed, the next piece feeds and cuts automatically. Or, when set to "Manual", the DUOMATE feeds, cuts, and holds a length for use. After the tape is removed, press the "Cycle Start" button to dispense the next length.

- Simple to Use - Simple place the box of DUOS behind the machine and feed into the DUOMATE! Optional stand holds the roll in place more securely.
- Safe Operation - The machine stops immediately if anything contacts the cutter assembly before it cuts the DUOS. Cycle continues automatically when the obstruction is removed. (If the cutter is physically blocked, the machine shuts itself down to prevent damage. It must then be turned off and the blockage cleared before it can be re-started).
- The display window shows the status of the machine at all times.

Standard Features:

- All settings are retained when the DUOMATE is turned off. No need to re-program the machine each time it is turned off and restarted.
- Dispensing speed is adjustable from 1 inch per second to 5 inches per second.
- Power feed forward and reverse for loading and unloading DUOS.
- Made in the U.S.A.
- Gluefast Part No. 150-GF for the DUOMATE.

Shown dispensing a pair of two-inch DUO strips, glued side down.
